

Build Your Own Microbe Scanner

- 1 Carefully cut along the dotted lines to remove one scanner from the page.
- 2 Snip out the white circle in the center. This is where your “lens” will go!

- 3 Glue or tape a round piece of red “lens” behind the hole so it covers the center.
- 4 Now you’ve got your own Microbe Scanner to use and find microbes on your patient’s medical film!
